Working Prototype Known Problems Report

Sound Stash

The Latecomers

November 2015

Creating Duplicate Users of the same username:

    Input - Registration of a username already present in the database
    Action - 404 "User already exists" error is returned
    Location - registration/views.py line 35: 'except IntegrityError'
    Fix - Catch the 404 Error and post a "Username already taken" popup with a chance to input a new username

User is able to delete the default playlist, which they shouldn't:
    Input - Delete Playlist -> Default in the /library/ page
    Action - Default playlist is deleted
    Location - library/views.py line 60: 'if (p.name=='default')
    Server logs show
    "[01/Dec/2015 06:49:46] "DELETE /library/default HTTP/1.1" 301 0
    [01/Dec/2015 06:49:46] "DELETE /library/default/ HTTP/1.1" 200 0"
    Suggesting a dropped '/' somewhere resulting in the failure of the request parsing
    Fix - /static/library.js line: 56 'req.open("DELETE", "/library/"+slug, true);'
    possible an error in this line, needs a trailing '/' after the slug

When registering, retyping password in Reinput Password field doesn't do a check:
    Input - Password <test> Reinput Password <test2>
    Action - Creation of user account with password "test" without failing verification
    Location - /registration/views.py l
    Fix - parse the POST request for the second password and do a verification, throw an error if they aren't equivilent
